

The 360° Magnetic Monopole Field Effect™ Technology

Welcome to our website

Quantakinetic Holdings (QKH) is a 100% privately owned U.S.A. Corporation which develops, manufactures, and licenses ultra-efficient custom designed rotating and linear electric motors for propelling all types of land, water, and air transportation and for powering all types of consumer and industrial appliances, pumps, equipment, tools, and machines. Our product offering also includes ultra-efficient custom designed electric generators for gensets, wind turbines, hydro-turbines, and electric vehicle range extenders plus hybrid powertrains which create electrical energy to power everything that requires electricity. Our motors and generators can run on or create both DC and AC power. The proprietary Quantakinetic Technologies™ (QKT™) Electric Motor/Generator electrodynamic architecture and concept supersedes all current technologies for power-to-weight ratio, power-to-size ratio, and efficiency plus reliability. They substantially decrease electric energy consumption if a motor or fuel consumption from the driving engine if a generator. Deployment of our custom designed electric motors/generators is based on timing decided with present and future partners.
